

## Chilas CF3 nm ultra-narrow linewidth laser

Wavelength range: 1550 nm  $\pm$  5 nm  
Fiber type: PM  
Connector type: FC/APC  
Package: standard 14-pin butterfly  
USA accession number: not yet available

Part Number: N/A  
Serial Number laser: MAP0xxxxxxxx  
Serial Number electronics: xxxxxxxx  
Model Number: LAX

*This component complies with the applicable portions of  
21 CFR 1002.10 / 21 CFR 1002.11 / 21 CFR 1002.12  
21 CFR 1002.13 / 21 CFR 1002.30a / 21 CFR 1002.30b  
21 CFR 1040.10 / 21 CFR 1010.2 / 21 CFR 1010.3  
Since this is a component, it does not comply with all of the  
requirements contained in 21 CFR 1040.10 and 21 CFR 1040.11  
for complete laser products.*

## 1. Introduction

Chilas develops and commercializes semiconductor external cavity lasers based on a state-of-the-art hybrid integration technology. The laser comprises an InP reflective semiconductor optical amplifier (RSOA) as gain medium and a Si<sub>3</sub>N<sub>4</sub> waveguide circuit as an external cavity. The RSOA is butt-coupled to the external cavity. The laser is housed in a compact, 14-pin butterfly package, enabling compatibility with any standard 14-pin laser diode mount. The single-frequency laser contains an integrated thermoelectric cooler (TEC), thermistor, and a polarization-maintaining output fibre with an FC/APC connector.

## 2. Operation of principle

The main concept of the laser is shown in the Figure 1. On the left-hand side, there is a gain section which is high-reflective on the left-hand side and anti-reflective on the right-hand side where it is connected to a TriPleX™ Silicon Nitride external cavity waveguide chip. The external cavity has two coupled micro-ring resonators (MRRs) with slightly different FSR in the cavity to ensure stable single frequency operation by Vernier effect. On the SiN chip, there are 3 heaters are positioned, one to control the phase of the light in the cavity, and two to control the resonant wavelengths of the ring resonators Ring 1 and Ring 2, which in turn controls the output wavelength. The laser's frequency can be tuned over a large range by MRR tuning.

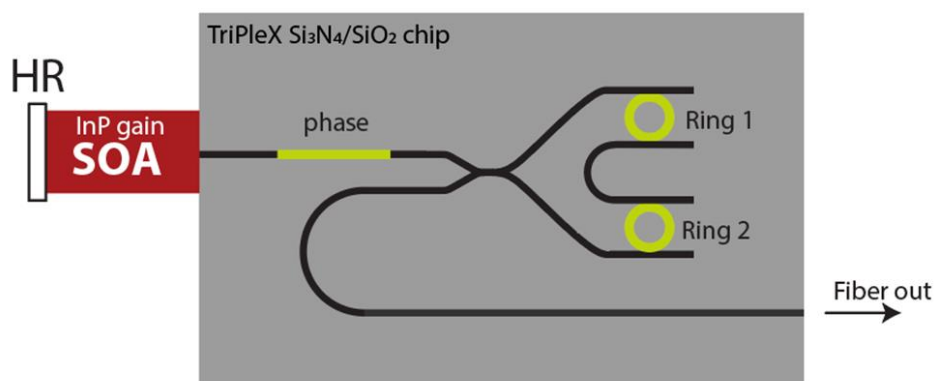

Figure 1: A schematic layout of the laser.

## 3. Optical isolation

Please note, there is no optical isolator added to the package. This laser type has an intrinsic optical isolation for the laser's wavelength ( $\pm 0.03$  nm) of  $\sim 8$ -10 dB, while for wavelengths different from the laser's wavelength the intrinsic optical isolation is a lot higher.

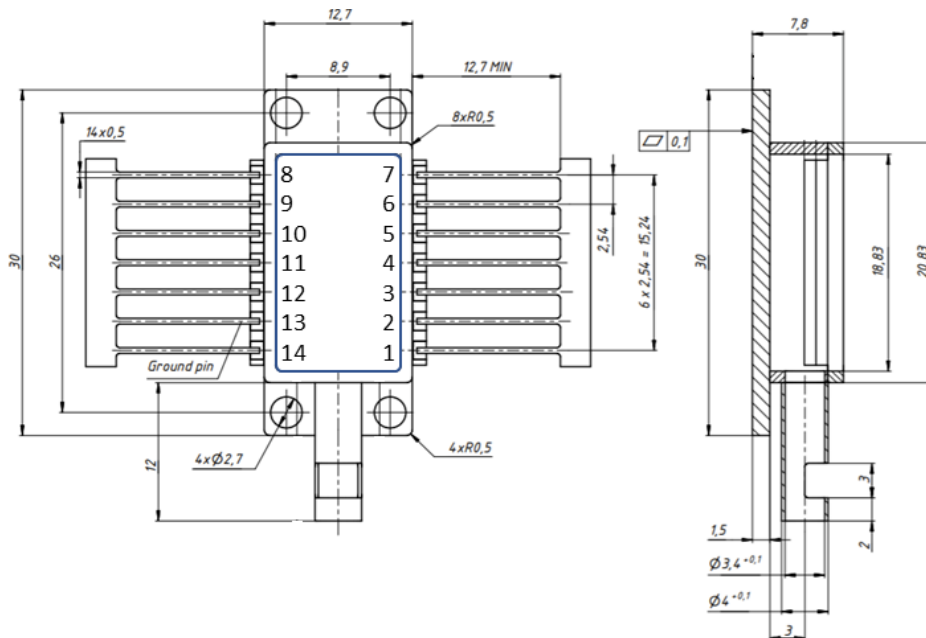

**4. Performance and specifications**

	Parameter	Specified values
<b>Optical</b>	Operating wavelength	1550 nm ± 5 nm
	Fiber-coupled output power @250 mA	≥ 13 dBm
	Intrinsic linewidth	≤10 kHz
	Side-mode suppression ratio	≥ 50dB
	Polarization extinction ratio	≥ 20 dB
	Frequency drift	≤ ±2.5 GHz
	Over -5~+75°C case temperature range	

<b>Electronic specifications</b>		
<b>Peltier element</b>	$\Delta T_{max}$	71 K
	$Q_{max}$	6.8 W
	$I_{max}$	1.8 A
	$U_{max}$	6.3 V
	$R_t$	0.06 K/W
<b>NTC</b>	$B_{value}$	3935 K
	Resistance @ 25°C	10 kΩ
<b>Gain section</b>	$I_{max}$	250 mA
	$I_{typ}$	150 mA
<b>External cavity</b>	Heater $V_{max}$	12 V
	Number of heaters	3
	Voltage for 2.π phase shift $V_{2\pi}$	11 V
	Heater resistance $R$	~ 250 Ω

Mechanical specifications		
	Parameters	Values
Package	Gold box	14-pin, butterfly-style package.
	TEC	$Q_{max} = 7.4 \text{ W}$ $I_{max} = 1.8 \text{ A}$ $U_{max} = 6.3 \text{ V}$ $ACR = 2.49 \text{ V}$
	Pigtail fiber	50 cm PM fiber with 900 $\mu\text{m}$ loose blue tubing, FC/APC connector, slow-axis alignment.

### 5. Mechanical structure and Pinout

Pin-out			
1	Peltier +	8	LD Anode
2	Heater ring 1	9	LD Cathode
3	Heater ring 2	10	Heater phase
4	Not connected	11	Not connected

5	Not connected	12	Not connected
6	NTC-	13	Heater ground
7	NYC+	14	Peltier -

## 6. Typical results

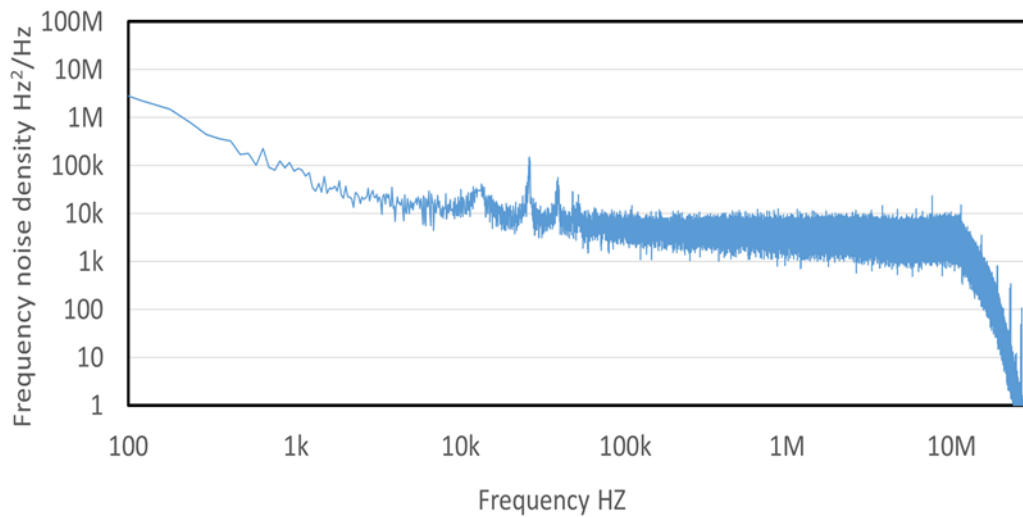

Figure 1: Frequency noise density as a function of frequency (Intrinsic linewidth 4 KHz).

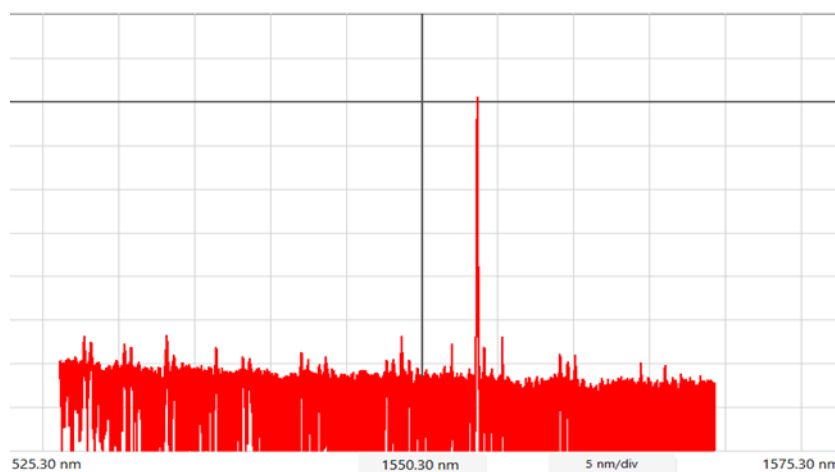

Figure 2: Measured SMSR > 50 dB. Note that the y-axis shows power spectral density, measured by an optical spectrum analyzer. It therefore does not show absolute optical power.

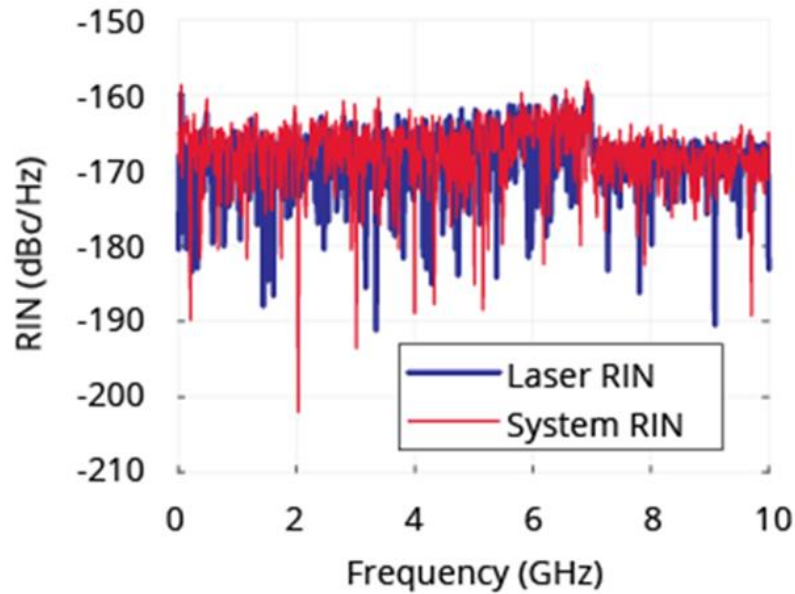

Figure 3: Typical RIN of the laser, compared to the RIN of the measurement system.

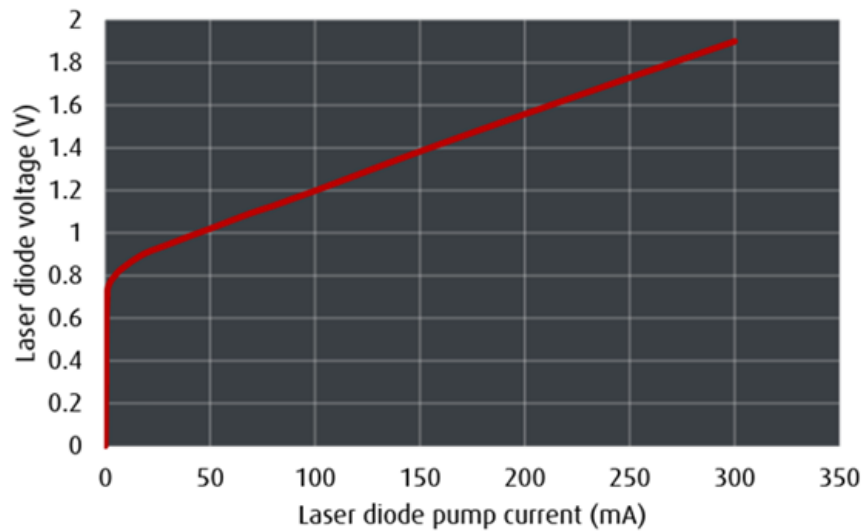

Figure 4: Typical V-I curve of the gain section.
